

JavaScript TASK Solutions

Task 1 — Student Registration Form

prompt(), let, const, console.log()

```
const studentName = prompt("Enter student name:");
let department = prompt("Enter department:");
let age = prompt("Enter age:");

console.log(`Welcome ${studentName}`);
console.log(`Department: ${department}`);
console.log(`Age: ${age}`);
```

Task 2 — ATM Withdrawal System

if else, comparison, logical operators

```
let balance = 10000;
let withdrawalAmount = Number(prompt("Enter withdrawal amount:"));

if (withdrawalAmount > 100 && withdrawalAmount < balance) {
    console.log("Transaction Successful");
} else if (withdrawalAmount < 100) {
    console.log("Minimum withdrawal amount is 100");
} else {
    console.log("Insufficient Balance");
}
```

Task 3 — Swiggy Discount Checker

ternary operator

```
let orderAmount = Number(prompt("Enter order amount:"));
```

```
orderAmount > 499
```

```
  ? console.log("Free Delivery Available")
```

```
  : console.log("Delivery Charges Applied");
```

Task 4 — Instagram Login System

nested if

```
let username = prompt("Enter username:");
```

```
if (username === "admin") {
```

```
  let password = prompt("Enter password:");
```

```
  if (password === "1234") {
```

```
    console.log("Login Success");
```

```
  } else {
```

```
    console.log("Wrong Password");
```

```
  }
```

```
} else {
```

```
  console.log("Invalid Username");
```

```
}
```

Task 5 — Traffic Signal System

switch statement

```
let signal = prompt("Enter traffic signal: red / yellow / green");
```

```
switch (signal) {  
  case "red":  
    console.log("STOP");  
    break;  
  
  case "yellow":  
    console.log("READY");  
    break;  
  
  case "green":  
    console.log("GO");  
    break;  
  
  default:  
    console.log("Invalid Signal");  
}
```

Task 6 — Employee Salary Calculator

function, parameters, return

```
function salaryCalculation(basicSalary, bonus) {  
    return basicSalary + bonus;  
}
```

```
console.log(salaryCalculation(25000, 5000));
```

Output: 30000

Task 7 — E-Commerce Cart Total

Array, for loop

```
let prices [100, 200, 300, 400];
```

```
let totalPrice 0;
```

```
for (let i 0; i < prices.length; i++) {  
    totalPrice totalPrice + prices[i];  
}
```

```
let averagePrice totalPrice / prices.length;
```

```
console.log("Total Price:", totalPrice);
```

```
console.log("Average Price:", averagePrice);
```

Output:

Total Price: 1000

Average Price: 250

Task 8 — WhatsApp Contact Book

Object, for in loop

```
let contact {  
  name: "Naveen",  
  phone: "9876543210",  
  status: "Available"  
};  
  
for (let key in contact) {  
  console.log(key + ":", contact[key]);  
}
```

Task 9 — Movie Ticket Booking

function, callback function

```
function payment() {  
  console.log("Payment Successful");  
}  
  
function bookTicket(callback) {  
  console.log("Ticket Booked Successfully");  
  callback();  
}
```

```
}
```

```
bookTicket(payment);
```

Output:

Ticket Booked Successfully

Payment Successful

Task 10 — Food Delivery Time Tracker

Generator Function

```
function* foodDeliveryTracker() {  
  yield "Order Confirmed";  
  yield "Preparing Food";  
  yield "Out for Delivery";  
  yield "Delivered";  
}
```

```
let orderStatus = foodDeliveryTracker();
```

```
console.log(orderStatus.next().value);  
console.log(orderStatus.next().value);  
console.log(orderStatus.next().value);  
console.log(orderStatus.next().value);
```

Output:

Order Confirmed

Preparing Food

Out for Delivery

Delivered
